Rachiba, G. I.
INFLUENCE OF ATROPINE ON THE ELECTRO-
CARDIOGRAM. [1963] [17]p. 14 refs. FASEB manuscript
no. S 293-2.

Order from OTS or SLA \$1.60

63-23012

Trans. of Klinicheskaya Meditsina (USSR) 1962, v. 40,
no. 9, p. 75-81.

DESCRIPTORS: Drugs, *Atropine, *Electrocardiog-
raphy, Diagnosis.

The phase of short-term increase in vagus nerve tone
preceding the negative vagotropic effect of atropine on
the heart can be manifested on electrocardiograms by
such complex disturbances as atrioventricular rhythm,
dissociation by interference, and wandering pacemaker,
as well as by deceleration of sinus rhythm and lengthening
of atrioventricular conductivity. The above disturbances
(Biological Sciences--Pharmacology, TT, v. 10, no. 6)

of rhythm are frequently observed after administration of atropine to young people with functional disturbances of the nervous system and increased vagus nerve tone, without symptoms of organic cardiac pathology. The frequent appearance under the influence of atropine of dissociation by interference and atrioventricular rhythm in non-rheumatic diseases and sometimes in healthy individuals lowers the diagnostic value of these cardiac reactions to the given alkaloid during the active phase of rheumatic disease. CLASSIFICATION OF WOOD PARTICLES. I. BASIC
PRINCIPLES OF PARTICLE SEPARATION AND
SEPARATION IN AN HORIZONTAL AIRSTREAM.
[1963] [19]p. 16 refs.
Order from SLA \$2.60

63-10946

Trans. of Holz als Roh- und Werkstoff (West Germany)
1962, v. 20, no. 1, p. 27-38.

DESCRIPTORS: *Particles, *Wood, Classification,
Separation, Gas flow, *Fiberboard, Quality control.

The tasks of sifting comprise on wood particles, the
mathematical bases of air sifting are derived and it is
proved that this is the procedure suited best for the
sifting of wood particles. The factor governing
separation is the floating-velocity which depends on
several influencing factors. The fluctuations of these
factors, except for those of the air resistance, can be
(Materials--Wood, TT, v. 10, no. 3) (over)

omitted. Therefore, tests have been carried out for which the technically significant procedure of sifting in a horizontal airflow was chosen. The separation of the particles according to their surface weight is quite well effected in accordance with theory. Shape and size are of minor importance. Frequency diagrams with a variation coefficient of some 30% are developing. By these scatterings the sifting becomes nonsharp. If sifting in a horizontal air-flow is used for wind-layered or throw-layered particleboards, these defects are rather rare. This is different if out of a mixture of chips those particles have to be separated which exceed a definite thickness.
